

Annette and I would like to thank you for your interest. Where we live in central North Dakota is in a D4 Exceptional drought category which has made feed resources virtually nonexistent. We have been hauling water to cows since the beginning of June, not only has this been expensive it also is very time consuming. After serious deliberations we have determined that the best move is to sell these cattle. We will try and gather enough feed to retain our replacement heifers, flush cows and pregnant recipients. The calves have been vaccinated with Bovi-Shield Gold 5 and Ultrabac7/somubac. Some of the cows have been Aled and all of them have been exposed to bulls. A supplement sheet will be provided in the coming days.

These cows have been good to us and it is very troubling to have to make such drastic decisions. We would like to thank Kyle and Lisa for their help and advice and wish you all success with your purchases. If you have questions about any of the lots please call or text me at 701-220-0189.

Thanks

Troy
